Claims 14-26 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contain subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventors, at the time the application was filed, had possession of the claimed invention. In claims 14, 21, and 23 "biologically-active cellular units" and "matter" lack clear antecedent basis in the specification as originally filed, and appear to be drawn to new matter. It is noted that the specification on pages 2-4 is drawn to the electroporation of waste-activated sludges containing intracellular and inter-cellular water, and the use of lysed cells as the food for the bioreactor. Claims 15-20, 22, 24, and 26 depend from the above claims.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 14-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Held et al. 6,491,820. Held et al. disclose (see col. 10 line 42 through col. 11 line 46) a method of treating a sludge substantially as claimed. The claims differ from Held et al. by reciting that the sludge contains biologically-active cellular units. It is submitted that the waste activated sludge treated in Held et al. is considered patentably indistinguishable from the sludge recited in the instant claims. It would have been obvious to one skilled in the art to modify the method of Held et al. by treating the recited sludge, to aid in providing food for the bioreactor. The use of an additional bioreactor would have been an obvious matter of process optimization to one skilled

in the art, depending on the specific wastewater treated and results desired, absent a sufficient showing of unexpected results.
